

Étale Cohomology Seminar 2026

Five weekly meetings · Online

An imaginative illustration of the conversations and ideas surrounding the development of étale cohomology.

We are organizing a weekly reading/discussion seminar following Daniel Litt's course *Étale Cohomology and the Weil Conjectures*.

Starts Friday, August 28, 2026

17:00-18:30 Lima / 19:00-20:30 Brasília

Videos, notes, and AI tools are used for preparation. Meetings are for mathematical community: verification, questions, examples, peer review, proof digestion, and shared understanding.

How it works: 3 + 2 + 1 + E + R + P

- **3** things you think you understood.
- **2** points of mathematical friction.
- **1** question worth discussing with humans.
- **E** one example or non-example.
- **R** review one contribution from another participant.
- **P** engage seriously with the common Problem of the Week.

Open to undergraduate, master's, PhD students, and other interested mathematicians. You do not need to understand every lecture completely before coming.

Interested?

Read the full plan and register here:

<https://alequisgs.github.io/etale-cohomology-seminar-2026-/>

Registration is through the Google Form embedded on the site.

Five pilot topics

- Weil conjectures and motivation.
- Étale morphisms and introduction to sites.
- Sites, sheaves, étale and fppf topologies.
- Morphisms of sites and fppf descent I.
- fppf descent II and the category of sheaves.

Meeting link sent to registered participants.

Funnel: WhatsApp / Telegram → seminar website → Google Form → registration → confirmation email → Google Meet.
